PROJECTS

- **Just In Time Compiler** : Developed a Just-In-Time compiler in Python using PLY (Lex/Yacc) for parsing and tokenizing expressions, featuring a lexer, parser, and code generator that translate high-level expressions into the x86_64 assembly. The compiler dynamically allocates memory for strings, optimizes stack usage, and executes generated machine code via a GUI built with Tkinter.
- **AI-Medical-Chatbot-Using-LangChain-And-Chainlit** : Developed an interactive AI medical chatbot using LangChain and Chainlit, leveraging Llama-2-7B for intelligent responses and FAISS for efficient document retrieval. Implemented a Retrieval-Augmented Generation (RAG) pipeline to provide accurate, context-aware answers from PDF-based medical knowledge sources. Designed a user-friendly chat interface with real-time query handling and dynamic response generation.
- **Host Intrusion Detection System** : Designed and implemented a Host-based Intrusion Detection System focused on monitoring system logs and detecting suspicious activities. Applied techniques such as signature-based and anomaly-based detection, and improved system resilience against common cyber threats.
